1 Introduction

This web tool allows you to explore trends in union membership and union contract coverage for registered nurses in the United States. You can use the tool to generate trend plots and chloropleth maps showing how these quantities change over time, filtered and/or grouped according to a variety of demographics (detailed below). The tool uses data derived from the Current Population Survey (CPS) public use microdata. For background information on the CPS, see the official CPS website¹.

¹<https://www.census.gov/programs-surveys/cps.html>

2 Details of the data

The tool operates on data derived from the Current Population Survey (CPS) public use microdata (see the official CPS website for information on the raw CPS data). Each entry in the data used by the tool corresponds to an individual interviewed as part of the CPS, and includes various demographic data on that individual, as well as flags indicating whether the individual is a union member or covered by a union contract. Each entry also includes the year in which the individual was interviewed, and a statistical weight used to calculate union membership and union contract coverage proportions.

The following are descriptions of the variables in the data used by the tool, including the possible values or levels that a particular variable can assume:

<code>year</code>	The year the individual was interviewed.
<code>sex</code>	<p>The individual's sex. This is derived from the CPS variable <code>PESEX</code>.</p> <p>Levels: <code>Male</code>, <code>Female</code></p>
<code>member</code>	Union membership flag. <code>TRUE</code> if the individual is a union member, and <code>FALSE</code> otherwise.
<code>covered</code>	Union contract coverage flag. <code>TRUE</code> if the individual is covered by a union contract, and <code>FALSE</code> otherwise.
<code>age</code>	The individual's age. This is derived from the CPS variable <code>PEAGE</code> or, if that is unavailable, the CPS variable <code>PRTAGE</code> .
<code>age_group</code>	<p>The individual's age group (16-24, 25-54, or 55 and over). This is derived from <code>age</code>.</p> <p>Levels: <code>16-24</code>, <code>25-54</code>, <code>55 and over</code></p>
<code>race</code>	<p>The individual's race. This is derived from the CPS variable <code>PTDTRACE</code>. It has levels for some of the more common races, and a level <code>Other</code> for other races. The levels of this variable are less fine-grained than those of <code>PTDTRACE</code> (see the CPS documentation for details).</p> <p>Levels: <code>White</code>, <code>Black</code>, <code>American Indian (Alaskan Native)</code>, <code>Asian</code>, <code>Hawaiian/Pacific Islander</code>, <code>Other</code></p>

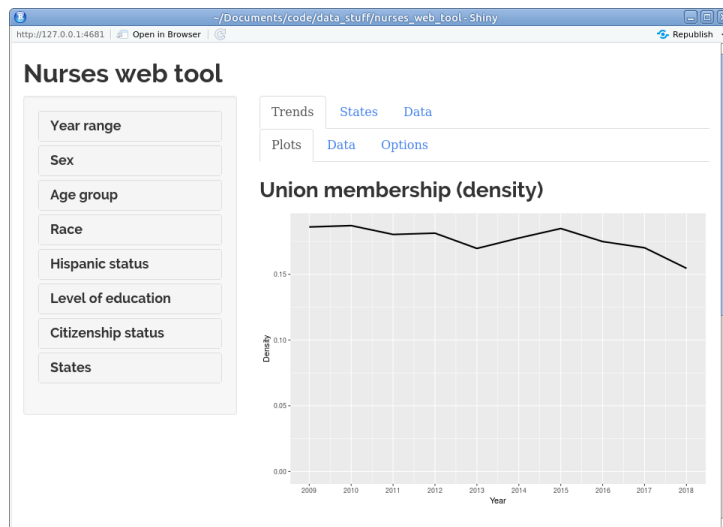

hisp	<p>Whether or not the individual is Hispanic. This is derived from the CPS variable PEHSPNON.</p> <p>Levels: Hispanic, Non-Hispanic</p>
educ	<p>The individual's level of education. This is derived from the CPS variable PEEDUCA. The levels of this variable are less fine-grained than those of PEEDUCA (see the CPS documentation for details).</p> <p>Levels: No high school, Completed high school, Some college, Associate degree, Bachelor's degree, Graduate degree</p>
citizen	<p>The individual's US citizenship status. This is derived from the CPS variable PRCITSHP. The levels of this variable are less fine-grained than those of PRCITSHP (see the CPS documentation for details).</p> <p>Levels: US native; Foreign-born, citizen; Foreign-born, non-citizen</p>
state	<p>The US state (including DC) where the individual resides. This is derived from the CPS variable GESTFIPS.</p> <p>Levels: (The two letter abbreviations for each of the 50 states, including DC)</p>
weight	<p>Statistical weight. Used to calculate union membership and union contract coverage proportions.</p>

3 Working with the web tool

The web tool provides you with two ways to explore union membership and union contract coverage: by examining trends and by examining state-wise patterns. You can filter the data according to the levels of many of the variables described above, and you can download the data if you desire to conduct more customized analysis.

3.1 Overview of the interface

When you first open the web tool, you are presented with the following interface:

The various components of the interface are described in the next few subsections.

3.1.1 The filtering tools

At the left side of the page you will notice a collection of drop down menus, each of which corresponds to a variable in the data used by the tool (which is described above). These are the *filtering tools*. The web tool operates on the subset of the underlying data selected using the filtering tools.

Clicking on a drop down menu in the filtering tools will reveal the levels of that variable currently included in the subset of the data being used by the web tool, displayed using checkboxes, slidebars, or other selection widgets. For example, in the case of checkboxes, a checked box indicates that the corresponding level of the variable is currently included; an unchecked box indicates that it is not included.

3.1.2 The Trends tab

Selecting the Trends tab at the top of the screen brings you to an interface for exploring trends in union membership and union contract coverage. This interface is described in detail below.

3.1.3 The States tab

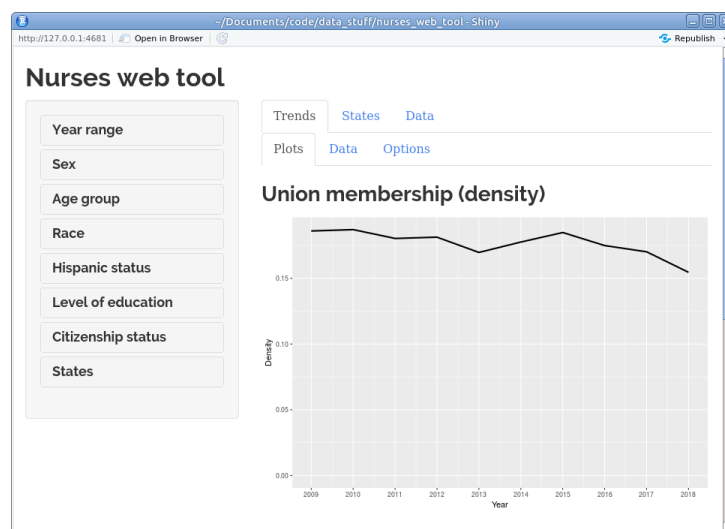

Selecting the States tab at the top of the screen brings you to an interface for creating choropleth maps for displaying union membership and union contract coverage per state. This interface is described in detail below.

3.1.4 The Data tab

Selecting the Data tab allows you to view and download the data selection currently being used by the tool. As described above, you can modify the data selection using the filtering tools at the left side of the page. The features of this tab are described in detail below.

3.2 Working with trends

If you select the Trends tab, you will be presented with the following interface:

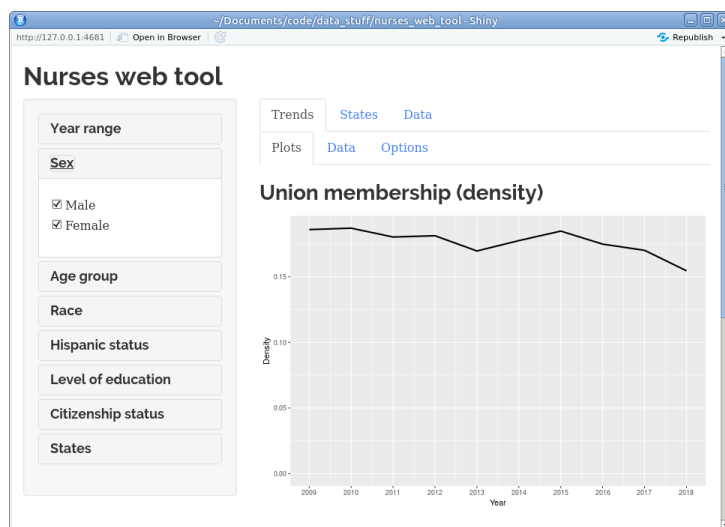

This interface allows you to explore trends in union membership and union contract coverage. There are three sub-tabs: Plots, for viewing the trend plots; Data, for viewing the data used to construct the trend plots; and Options, for setting options related to the trend plots.

To illustrate typical usage, we will work through several examples.

1. As a first example, let us create some basic trend plots showing union membership and union contract coverage trends for black, female nurses in the west coast states (California, Oregon, and Washington).

First, select Trends → Plots to access the interface for viewing trend plots.

Next we need to select the subset of data we want to work with. In this case, we want to examine black, female nurses in California, Oregon, and Washington. We can accomplish this using the filtering tools at the left side of the page. Click on the drop down menu labeled Sex in the filtering tools. You should see something like the following:

We only want to examine female nurses, so uncheck the checkbox labeled Male. Restricting our attention to black nurses is similar: select the Race tab from the filtering tools and uncheck every checkbox except for the one labeled Black.

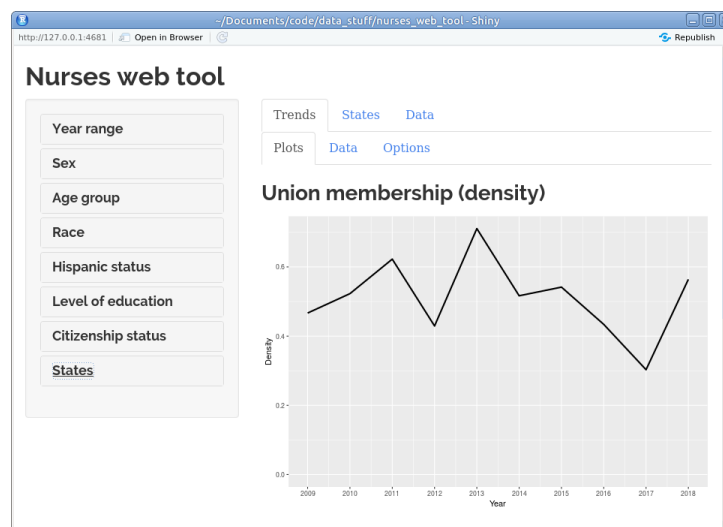

Selecting our states of interest is a little different. Select the States tab from the filtering tools. You should see something like the following:

The screenshot shows a close-up of the "States" filter in the sidebar. It is a dropdown menu with the text "AL, AK, AZ, AR, CA, CO, ..." and a downward arrow. The menu is open, showing the list of states.

Clicking on the drop down menu allows you to select your states of choice:

In this case, we want to select California, Oregon, and Washington (labeled CA, OR, and WA, respectively, in the drop down menu above). The easiest way to do this is to click Deselect All to remove all states from the selection, and then to select CA, OR, and WA from the drop down menu. Do this now.

Note that you can hide a tab in the filtering tools by clicking on the tab again (just as you did to open the tab). Doing this, we end up with the following:

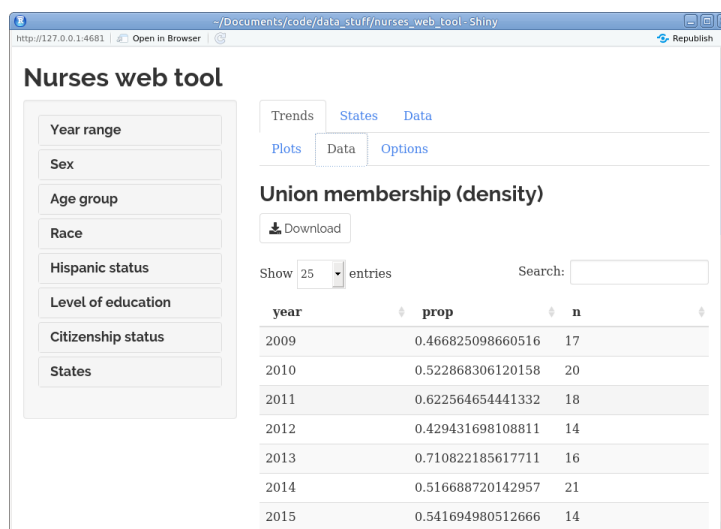

Specifically, we end up with two trend plots: one showing union membership over time, and one showing union contract coverage over time:

You can save either of these plots by right-clicking it and selecting the copy option from the drop-down menu, as you would with any other image on a webpage.

Note that you can view the data used to generate the two trend plots by selecting Trends → Data. Doing this, you should see the following interface, which allows you to examine the data and download it in CSV format if you decide to perform custom analysis:

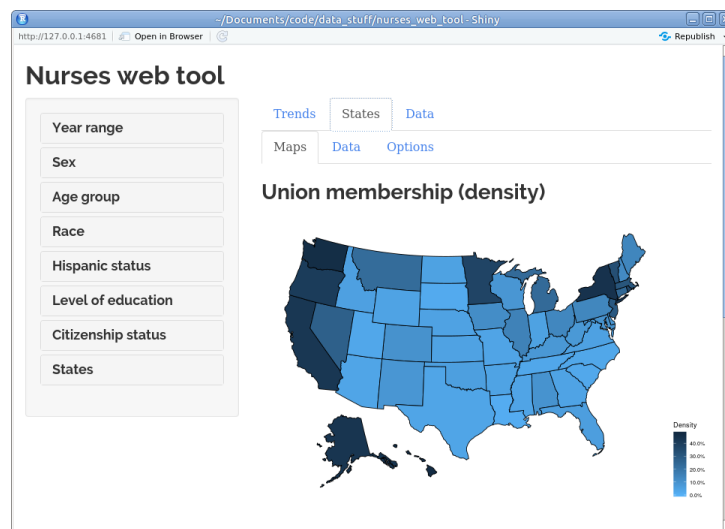

- For our second example, we will create trend plots showing the difference in union membership and the difference in union contract coverage among nurses in the age group 25-54 and nurses in the age group 55 and over.

3. In our third and final example we will create trend plots showing the difference in union membership and the difference in union contract coverage among nurses in the tri-state area (New York, New Jersey, and Pennsylvania) who are US native, foreign-born citizens, and foreign-born non-citizens.

3.3 Working with maps

If you select the States tab, you will be presented with the following interface:

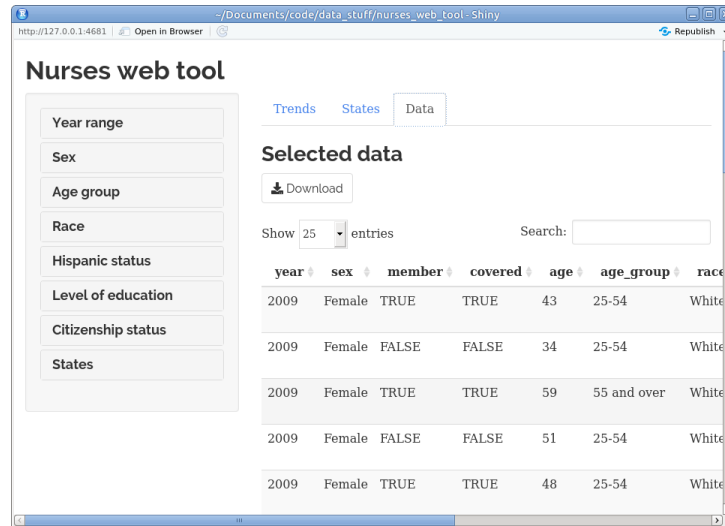

This interface allows you to create choropleth maps displaying union membership and union contract coverage per state over the years selected. There are three sub-tabs: Maps, for viewing the choropleth maps; Data, for viewing the data used to construct the choropleth maps; and Options, for setting options related to the choropleth maps.

To illustrate typical usage, we will work through several examples.

1. As a first example, we will create a choropleth map showing union membership and union contract coverage among Hispanic nurses in the west coast states (California, Oregon, and Washington), over the years 2010 to 2015.
2. For our second example, we will create a choropleth map showing union membership and contract coverage among all nurses in all states in the year 2011.

3.4 Examining the data selection

If you select the Data tab, you will be presented with the following interface:

The screenshot shows a web browser window with the URL `http://127.0.0.1:4681` and the title `~/Documents/code/data_stuff/nurses_web_tool - Shiny`. The browser window displays the "Nurses web tool" interface. On the left, there is a sidebar with filters: Year range, Sex, Age group, Race, Hispanic status, Level of education, Citizenship status, and States. The main content area has three tabs: Trends, States, and Data. The Data tab is selected. Below the tabs, there is a "Selected data" section with a "Download" button. Below the download button, there is a "Show 25 entries" dropdown and a "Search:" input field. Below the search field, there is a table with the following columns: year, sex, member, covered, age, age_group, and race. The table displays six rows of data for the year 2009.

year	sex	member	covered	age	age_group	race
2009	Female	TRUE	TRUE	43	25-54	White
2009	Female	FALSE	FALSE	34	25-54	White
2009	Female	TRUE	TRUE	59	55 and over	White
2009	Female	FALSE	FALSE	51	25-54	White
2009	Female	TRUE	TRUE	48	25-54	White
